

COMFORTING

Infinite foam  
For seamless productivity

# Infinite Foam

Infinite Foam is a shortcut to operational excellence! Using a new production process called **InviJoint**, we can supply your foam in continuous rolls with no visible joints. This saves you time, offers you more flexibility and helps you to reduce waste in your processes.

## How is Infinite Foam different?

Traditional foams are supplied in 60m rolls with visible joints that are removed after lamination. The joints can amount to 15cm – 50cm of scrap per roll, which is discarded.

*InviJoint*

*Examples of traditional methods*

Our Infinite Foam is supplied in continuous rolls. With no visible joints to remove, you can reduce both costs and waste.

# Seamless production

As there are no noticeable joints to remove after lamination, you can save time and go straight to the next stage in production. There is no need to devote time and manpower to marking joints or scrap removal and disposal.

The seamless foam solution from Recticel and Eurofoam also means that designers do not have to take joints into consideration. This offers them greater freedom to create the designs they want for comfortable, aesthetically-pleasing vehicle interiors.

## Discover our Invijoint products

Our Invijoint includes several product families designed to deliver the comforting and sensing attributes needed in modern automotive interiors. These include Automotive Esters, Dockets, Lamiflex and Seating Flikes for seat covers. For headliners, we supply Automotive Esters and Flikes. We are gradually expanding our portfolio to provide more foam grades as Infinite Foam.

## About Eurofoam

The Eurofoam Group is the leading manufacturer of flexible polyurethane foams in Central and Eastern Europe. Through a strong network of 33 production and converting plants and 3 commercial offices, we serve customers in almost all areas of industry. Our high quality comfort foam is primarily used in the bedding and furnishing industries. We also supply special foams for technical applications to machine and sports equipment manufacturers, and the automotive, construction and packaging industries.
